FIELDS OF INTEREST

Primary: Macroeconomics

Secondary: Firm Dynamics, Firm Heterogeneity, International Trade, Financial Economics

EDUCATION

European University Institute <i>Ph.D. in Economics</i>	2020–2026(expected)
Fudan University <i>Ph.D. in Finance</i>	2016–2020
Hong Kong Polytechnic University <i>M.A. in Finance</i>	2011–2012
Guangdong University of Foreign Studies <i>B.A. in French & B.A. in Economics</i>	2007–2011

VISITING EXPERIENCE

Visiting Researcher <i>Bank of Finland Institute for Emerging Economies</i>	2024
Visiting Student <i>Universitat Pompeu Fabra</i>	2023
Visiting Student <i>London School of Economics and Political Science</i>	2018

WORKING PAPERS

Export Dynamics of Multi-Product Firms with (Non-)Differentiated Products (Job Market Paper)

Presented at European Doctoral Programme Jamboree (2025), Bonn; Macro Working Group (2025), European University Institute; 5th National Macroeconomics Doctoral Academic Forum (scheduled), Xiamen University.

Abstract: Canonical models with heterogeneous firms and sunk export costs predict more profitable firms export (“export sorting”). This paper shows export sorting pattern varies systematically with product differentiation. Using Slovenian administrative data, I document that the gap in value added per worker between exporters and non-exporters is smaller in more differentiated sectors, particularly among multiproduct firms. I rationalise this pattern with a model in which multiproduct firms choose product scope and export participation based on cost efficiency and market-specific product appeal, featuring a “star-product” mechanism. When export costs are shared across products, high-appeal products pull marginal product lines into export bundles, diluting measured productivity among exporters. This composition effect is especially pronounced in high-differentiation sectors, where high markups allow less appealing products to be exported. The model reproduces observed sorting patterns when estimated separately for high- and low-differentiation sectors. I then evaluate a 50 percentage point tariff increase on a single product and find large contractions with substantial spillovers in the low-differentiation sector but minimal spillovers and little aggregate response in the high-differentiation sector.

Collateral Constraints and Asset Composition

Presented at Firm Dynamics Seminar (2025), Liaoning University; BOFIT Seminar (2024), Bank of Finland; European Doctoral Programme Jamboree (2024), Barcelona; Macro Working Group (2024), European University Institute.

Abstract: This paper studies how collateral constraints shape firms’ asset composition between real estate and non-real-estate capital. I build a dynamic two-asset model with asset-specific convex and non-convex adjustment

costs, as well as asset-specific pledgeability. I estimate the model using data on Chinese listed manufacturing firms. The estimates indicate greater pledgeability of real estate but substantially higher fixed costs of adjusting it. With adjustment and financial frictions, the model matches the observed right-skewed distribution of the real-estate-to-non-real-estate ratio and the declining share of real estate in total capital as capital size increases. Removing financial frictions eliminates precautionary investments and reduces aggregate capital and revenue; removing both financial frictions and fixed costs raises aggregate capital and revenue. In both counterfactuals, aggregate TFPR increases. In a real-estate-crisis scenario in which real estate becomes non-pledgeable, investment tilts towards non-real estate due to its higher collateral value and aggregate capital rises; however, misallocation worsens: aggregate TFPR falls by 3.6% and revenue by 0.3%.

Revisiting the Investment Regressions: State-owned Firms vs. Private Firms in China

Presented at Finance Seminar (2023), Universitat Pompeu Fabra.

Abstract: The investment regression on a sample of Chinese listed firms shows that there is a significant correlation between investment rate and cash flow ratio after conditioning on average Q. This is true for both state-owned firms and private firms, which are conventionally considered to have different financial conditions. As noted by Cooper and Ejarque (2003), the violation of the constant-returns-to-scale assumption creates a wedge between average Q and marginal Q and can lead to a spurious cash effect in the investment regression even when there are no financial frictions. Following their argument, this paper examines the investment regression results of the Chinese firms by estimating a Hayashi's (1982) model which allows for decreasing returns to scale. The estimation results suggest that despite the decreasing returns to scale of capital, the presence of financial constraints brings the standard capital adjustment model closer to the data moments of both state-owned and private firms in China.

WORK IN PROGRESS

Product Differentiation and Export Dynamics of Multi-destination Multi-product Exporter

with Marius Gruenewald

POLICY WORK

Firm Responsiveness over the Business Cycle: New Evidence from Europe (CompNet Firm Productivity Report, 2025)

With Alberto Ferreira and Javier Miranda

Presented at FINPRO 4 Conference (2024); TSI Concluding Conference (2025).

PROFESSIONAL ACTIVITIES / SERVICE

Master in Economic Research (MRes) Student Mentor
European University Institute

2025–2026, 2023–2024

External Research Consultant
The Competitiveness Research Network

2024–present

Co-Organizer
Macro Working Group, European University Institute

2021

TEACHING

Graduate level

Dynamic Economics: Simulation-Based Estimators, EUI
TA for Russell Cooper

2022

Financial Theory and Policy, Fudan
TA for Lijian Sun

2017

Undergraduate level

Econometrics, NYU Florence
TA for Giampiero M. Gallo

2022

Other

<i>Digital Currencies and Digital Finance, Florence School of Banking and Finance</i>	2023
TA for Thorsten Koeppel & Olena Havrylychuk	
<i>Machine Learning: Tools and Applications, Florence School of Banking and Finance</i>	2022
TA for Iman Van Lelyveld & Dieter Wang	
<i>International Finance, Fudan International Summer Session</i>	2019
TA for Xiaoyan Fan	

OTHER PROFESSIONAL EXPERIENCE

Financial Officer	2013–2015
<i>Guangdong Materials Import & Export Corp.</i>	
Assistant Business Officer	2012–2013
<i>The Bank of East Asia</i>	

AWARDS & GRANTS

Job Market Fund	2025
<i>European University Institute</i>	
Grants for Foreigners	2020–2024
<i>Italian Ministry of Foreign Affairs & International Cooperation</i>	
Outstanding Graduate	2020
<i>Fudan University</i>	
State Scholarship	2018
<i>China Scholarship Council</i>	
Outstanding Ph.D. Student	2017
<i>Fudan University</i>	

SKILLS

Programming: Julia, Python, MATLAB, R, Stata

Languages: Chinese (Native), English (Fluent), French (Intermediate), Cantonese (Basic)
